

Endpoint investigations

BIR LBO —
dc655cc7187a5959cd573c93279f2c805d4ed680b5c22c

Evidence (from regenerated summary):

Metric	Value
Organisation	Birmingham City Council
Dataset	local-authority
Collection	listed-building
Pipeline	listed-building-outline
First resource start date	2024-09-24
Last resource start date	2025-08-13
Total resources	298
Single-day resources	280
Single-day resources (%)	94.0%
Days spanned (first → last)	323
Resources per day (span)	0.923
Daily for last 7 days	no
>20 instances in last 30 days	yes
Stale resource (end_date older than 30 days)	no

After inspecting endpoints URL, I can see that there is the following in the geojson: ENTRY_DATE: "2025-08-14". This appears to be adding the current date instead of the original date of creation. If this is happening each day, then this would explain why a new resource is being created.

BIR TPZ —
2d3cb22e544acf2029c608a945e64943d2bec415ad2ad

Evidence (from regenerated summary):

Metric	Value
Organisation	Birmingham City Council
Dataset	local-authority
Collection	tree-preservation-order
Pipeline	tree-preservation-zone
First resource start date	2024-09-24

Metric	Value
Last resource start date	2025-08-13
Total resources	296
Single-day resources	275
Single-day resources (%)	92.9%
Days spanned (first → last)	323
Resources per day (span)	0.916
Daily for last 7 days	yes
>20 instances in last 30 days	yes
Stale resource (end_date older than 30 days)	no

After inspecting endpoints URL, I can see that there is the following in the geojson: ENTRY_DATE": "2025-08-14". This appears to be adding the current date instead of the original date of creation. If this is happening each day, then this would explain why a new resource is being created.

LCE CAD — 864d74ebb515466435db25df7b4c936077e745f51b9ec

Evidence (from regenerated summary):

Metric	Value
Organisation	Leicester City Council
Dataset	local-authority
Collection	conservation-area
Pipeline	conservation-area-document
First resource start date	2024-11-06
Last resource start date	2025-08-13
Total resources	277
Single-day resources	276
Single-day resources (%)	99.6%
Days spanned (first → last)	280
Resources per day (span)	0.989
Daily for last 7 days	yes
>20 instances in last 30 days	yes
Stale resource (end_date older than 30 days)	no

Possible issues:

The two .zip files have different raw hashes:

File 1 hash: cfb92791a47884e624e8d6d2e2d4d0b4c26bf9c4ccc553084c9f6bf7db73390a

File 2 hash: 45f7517f85f0bc5f902dc93fc8b753650efd41568eaeae9d024d3d0e9cc47202

They are not identical, meaning some content or metadata inside the XLSX archives is different, even if the visible spreadsheet data might look the same.

DEFRA AQMA — fc2f0599d4604ae4a9ceeafa994b2583be70bd37552b8f

Evidence (from regenerated summary):

Metric	Value
Organisation	Department for Environment, Food & Rural Affairs
Dataset	government-organisation
Collection	air-quality-management-area
Pipeline	air-quality-management-area
First resource start date	2025-02-04
Last resource start date	2025-08-13
Total resources	185
Single-day resources	181
Single-day resources (%)	97.8%
Days spanned (first → last)	190
Resources per day (span)	0.974
Daily for last 7 days	no
>20 instances in last 30 days	yes
Stale resource (end_date older than 30 days)	no

Possible issues:

Whole ZIP hash: Different → your pipeline will treat them as new resources if it hashes the full ZIP.

Actual shapefile content: .shp, .dbf, .shx, and .prj files are byte-for-byte identical between the two zips.

Differences found: Only in ZIP-level metadata (file modification timestamps, compression metadata, archive order).

WBK CA — 64b205f56014fc81435e61bb55745dbfac6fe7c87dcd13c

Evidence (from regenerated summary):

Metric	Value
Organisation	West Berkshire Council
Dataset	local-authority
Collection	conservation-area
Pipeline	conservation-area
First resource start date	2024-01-24
Last resource start date	2025-08-13
Total resources	152
Single-day resources	108
Single-day resources (%)	71.1%
Days spanned (first → last)	567
Resources per day (span)	0.268
Daily for last 7 days	no
>20 instances in last 30 days	yes
Stale resource (end_date older than 30 days)	no

Possible issues:

1. Timestamps

Multiple last_updated and retrieved_at fields differ by date/time, even though the content appears otherwise unchanged.

This alone would cause the system to treat the files as distinct if it uses a full-file hash or metadata-sensitive comparison.

1. Minor ordering differences

In some nested arrays/objects, the order of elements differs slightly. If your pipeline doesn't normalise ordering before hashing, this would also trigger a "new" resource.

1. No meaningful content changes

Aside from timestamp metadata and ordering, the actual payload (URLs, attributes, data content) is identical.
